

## TXM VMIS 3xx Marine Videoscope

### The Revolution in Professional Video Inspection

Exploring new dimensions:

With the miniature pan and tiltable camera head, the **TXM VMIS 3xx** enables unexpected possibilities in the video inspection of pipes, turbo chargers and liners etc.. The lens gives a high resolution picture and allows the detection of cracks, defective welding seams or seals. The integrated [20 meter push rod](#) means inspections can be carried out deep inside inaccessible areas!

The small camera head, only **40 mm diameter**, ensures even the tightest places can be visually checked. Furthermore, the camera head tilts through 180° and even pans around 360°. This flexibility enables a complete insight into mechanical equipment, tanks, close intermediate ceilings or liners.

**In addition: This Innovation is super bright lighting, waterproof and simply to use.**

The Videoscope is ready to use straight after switching on.

The wide screen TFT monitor gives crystal clear pictures allowing quick identification of problems before they occur. The integrated video output (PAL resolution) means files can be documented and saved on a PC. The power supply of the TXM VMIS offers simultaneous operation and battery recharging. The state-of-the-art NiMH battery packs provide 1.5 hours continuous operation. The scope of supply includes the camera, monitor and all accessories all in one rugged heavy duty carrying case.
